Date: August 16, 2022
To: City of Mukilteo
From: John McMillan, PE, Project Manager
Subject: 5th Street Bike and Pedestrian Improvement Project Transportation Summary Memo

This document has been prepared by KPFF Consulting Engineers in partnership with Fehr and Peers for the City of Mukilteo on the 5th Street Bike and Pedestrian Improvement Project

**John McMillan, P.E.
KPFF Consulting Engineers
Project Manager**

1. Introduction

The Mukilteo 5th St. Bike and Pedestrian Projects intends to improve cyclist and pedestrian facilities, connectivity, and safety.

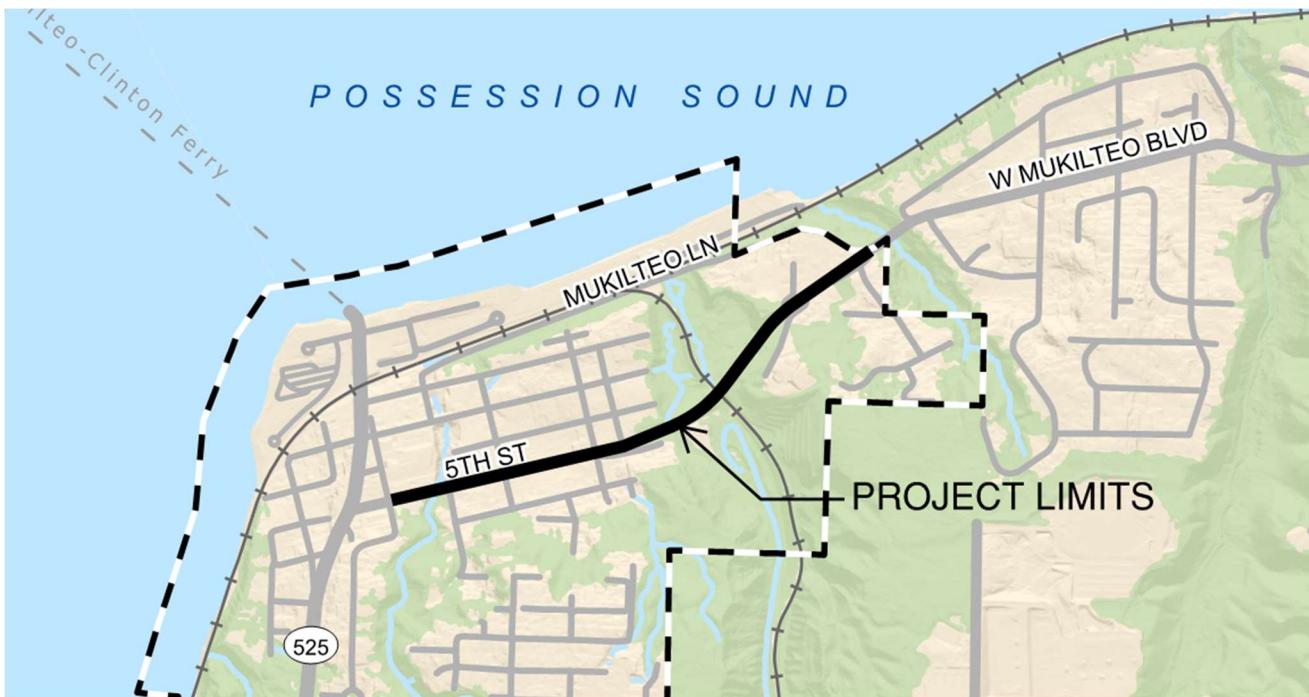

Figure 1-1: Project Site Location

The project scope and proposed treatments have been developed after careful review of the existing corridor (figure 1-1) by the design team, conversations with a project steering committee, public engagement efforts, coordination with City staff, elected officials and evaluation of a wide range of alternative treatments.

This report identifies anticipated transportation impacts when the project is constructed.

2. Executive Summary

The project will improve pedestrian and bicyclist accessibility within the project area between Old Town Mukilteo and the City of Everett. The project will have minimal to no anticipated impacts to vehicle transportation, but is expected to calm general traffic speed in the corridor.

Some existing street parking along the corridor will be repurposed for pedestrian and bike facilities. This repurpose may require some local residents and visitors to park slightly further away, or use existing ally access for parking accommodations to private properties. The City will be reaching out to private property owners without driveways along the corridor with nearby street parking removal to coordinate potential driveway construction to private property to mitigate this change in right of way usage.

Pedestrian access and safety in the corridor is expected to be greatly improved. Continuous corridor long pedestrian facilities will be provided and physical separation will be provided between pedestrians and bikes/general purpose traffic will also be added. A rapid repeating flashing beacon will be installed at a commercial focused intersection at 5th Street and Lincoln Avenue to improve the pedestrian crossing experience.

New illumination systems will also bring corridor lighting performance to modern standards and address existing sub-standard illumination performance in the corridor.

3. Transportation Investments

Project scope addresses needs and honor many community values we have heard speaking with a wide range of parties, including many residents along the corridor. The proposed project investments can be reviewed on the attached roll plot.

Proposed investments within Old Town between Lincoln and Japanese Gulch include:

- Roadway rechannelization with two 11-foot general purpose lanes to calm traffic
- Bike facility investments in full bike lanes east of Cornelia to the Japanese Gulch parking area
- Sharrow bike treatments within general purpose lanes between Lincoln to Cornelia
- Construction of pedestrian walkways separated from bike and vehicle traffic on both sides of the roadway for this segment
- Street illumination system upgrades to meet modern illumination for this type of corridor
- Installation of a physical buffer between pedestrians and bikes/general traffic, which will likely be a 2 foot wide section of grass
- Retention of street parking on the north side of the roadway between Park Ave and Cornelia Ave and on the south side between Park Ave and Loveland Ave
- Pavement maintenance treatments for the full segment
- Construction of water quality treatment infrastructure to treat stormwater
- Intersection treatments to calm traffic, which may include a "raised intersection" traffic calming treatment at 5th and Cornelia
- Installation of a Rectangular Rapid Flashing Beacon at 5th and Lincoln.

Proposed investments on W Mukilteo Boulevard between Japanese Gulch to the Everett City Limits include:

- A new inbound bike lane from Everett to Japanese Gulch
- Spot channelization investments to improve the pedestrian experience
- Street illumination system upgrades to meet modern illumination for this type of corridor
- Roadway rechannelization with two 11-foot General Purpose Lanes to calm traffic

- Investment in a gateway / traffic calming treatment west of the intersection of Mukilteo Lane and W Mukilteo Blvd.

The proposed improvements will:

- Calm traffic traveling on 5th Street through reduced lane widths, intersection treatments, improved illumination, and lane “meandering.”
- Have no impact to most existing private fences and retaining walls constructed within the public Right of Way.
- Retain the old town 5th Street aesthetics while removing existing accessibility roadblocks and enhance transit access.
- Have very minor roadway widening from the current roadway paved widths
- Install modern storm drainage treatment infrastructure

4. Proposed Transportation Impacts

General Vehicle Traffic

The project will not modify the existing traffic operations in terms of capacity or movements. It is anticipated traffic calming treatments will reduce a historic speeding issue within the community. Project scope will:

- Install a new Rapid Repeating Flashing Beacon (RRFB) at the intersection of Lincoln and 5th Street
- Remove an existing RRFB at Cornelia and 5th
- Introduce traffic calming treatments in the corridor
- Reduce general purpose travel lane width from 12-13 feet to 11.0 feet within the project corridor

Pedestrians

The project will install continuous pedestrian facilities throughout the corridor and remove conflict points within the corridor where existing street parking requires pedestrians to enter the general purpose traffic lane to travel within the corridor, install spot paving treatments to provide corridor wide paved pedestrian facilities and remove obstructions within the publicly accessible route.

Pedestrian facilities will also be separated from bikes and general traffic in the corridor outside intersection areas. This report has a proposed crossing treatments memorandum as an appendix, which has commentary on proposed treatments within the corridor.

Bike Facilities

The project will repurpose and install bike facilities throughout the majority of the corridor. Separated bike facilities and sharrows treatments are proposed in the corridor to remove conflict points for bikers.

Proposed treatments on 5th Street from Lincoln to Japanese Gulch area include:

- Bike facility investments in full bike lanes east of Cornelia to the Japanese Gulch parking area
- Sharrows bike treatments within general purpose lanes between Lincoln to Cornelia

- Bike wayfinding treatments

Proposed investments on W Mukilteo Boulevard between Japanese Gulch to the Everett City Limits include:

- A new inbound bike lane from Everett to Japanese Gulch
- Enlarged shoulders for outbound bike traffic.
- Connection to separated bike lanes at the Everett City Limit.

Parking modifications proposed by the project

The proposed treatments will prohibit street parking at locations where parking is not currently prohibited.

Notable locations will include:

- 5th Street on the south side of the street from Loveland Avenue to Cornelia Avenue
- 5th Street on the north side of the street from 50 feet west of Cornelia Avenue to Centennial Park
- 5th Street – W Mukilteo Blvd on the south side of the street to the Everett City Limits
- W Mukilteo Blvd on the north side of the street from Centennial Park to the Everett City Limits

Existing parking space will be re-purposed to pedestrian purposes, allowing a continuous pedestrian pathway on both sides of the corridor. Parking removal is not anticipated to reduce on street parking capacity below existing demand; as ample and nearby street parking is available off-corridor and street parking will remain within the corridor. The project is anticipating spot mitigation treatments with property owners who are losing nearby street parking. Mitigation treatments may include new driveway construction to private parcels abutting 5th Street, or spot widening for parking within the right of way.

5. Speed Study 2020

The City of Mukilteo conducted a speed study of the corridor in October of 2020. The speed study confirmed the 85h percentile of the vehicles traveling in the corridor where traveling above the post speed limit of 25 MPH, with the 85th percentile traveling at 33 MPH. The average annual daily traffic was reported at 4516 vehicles. The study is attached to this report as an appendix

6. Collision Data

The City of Mukilteo had limited collision data within the corridor available for review. Most data available was reported for the 2019 year. City staff turnover complicated the ability to recover additional crash data. City records available to the Consultant indicate five collisions occurred within the corridor in 2019. A summary of collisions include:

- Two vehicles on vehicle collisions – non injury
- Two vehicle on parked vehicle collisions – non injury
- One vehicle striking a fixed object – non injury

Records indicate causes included driver error, distracted driving and one case of impaired driving (possibly compounded by icy conditions)

5th Street Crossing Treatments Memo Appendix

Draft Memorandum

Date: November 21, 2021

To: Connie Bowers, Brian Wirt - City of Mukilteo

John McMillan - KPFF

From: Emily Alice Gerhart, AICP, Chris Breiland, PE – Fehr & Peers

Subject: 5th Street Crossing Treatments

The City of Mukilteo is looking at a range of improvements on 5th Street from Lincoln Avenue to the Everett city limit, which will benefit people walking, biking, driving, and using public transit in Old Town Mukilteo. After facilitating conversations with community members, the project team is currently developing a preferred alternative.

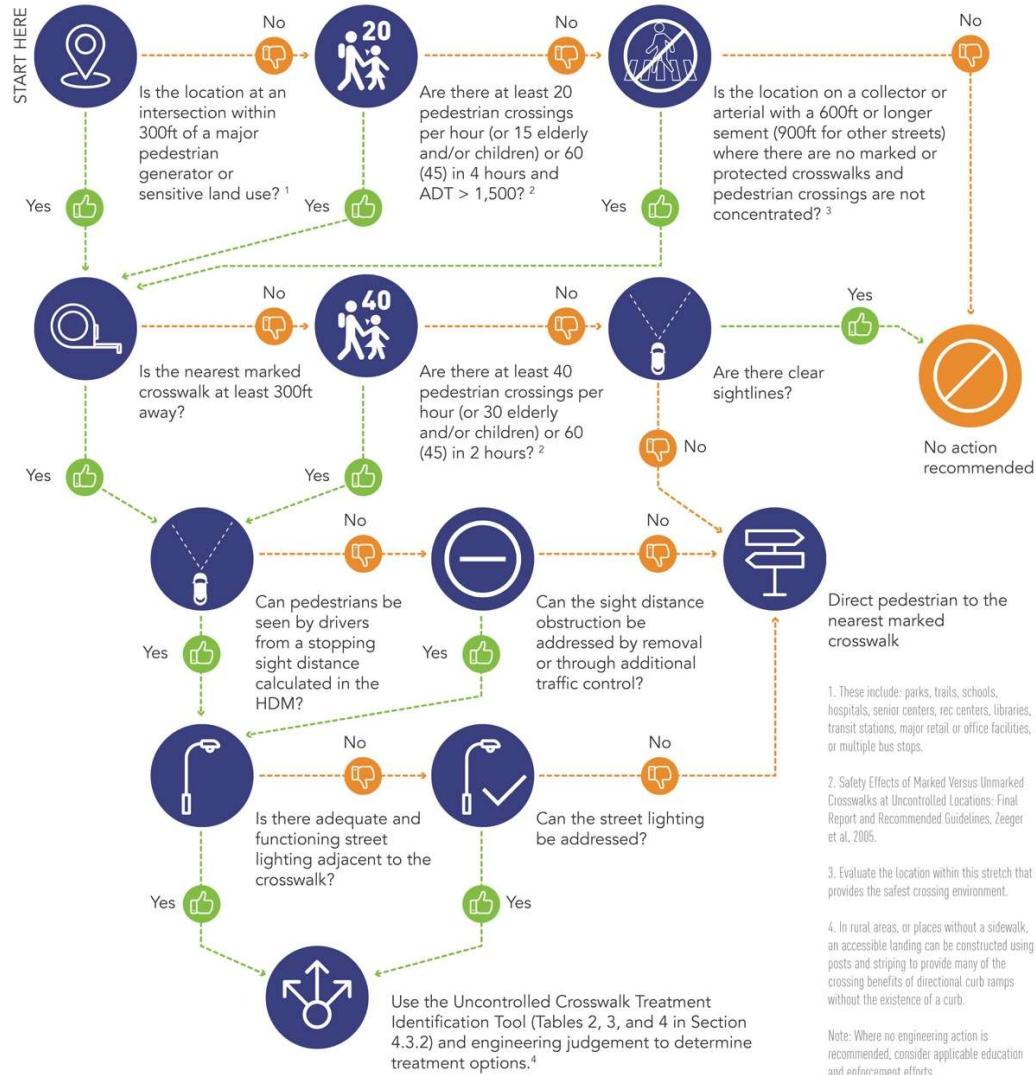

One of the key project goals is to support active transportation such as walking and biking, and improve connections to businesses in Mukilteo. As such, it is important that the preferred alternative includes safe and comfortable facilities for people to cross the street to access businesses, transit stops, parks, and local trails. The purpose of this memorandum is to present recommendations for crossing treatments at key locations along the corridor.

Fehr & Peers reviewed the proposed designs (as of November 3, 2021) and assessments for crossing locations and treatment types were made based on best practices, including NACTO, FHWA, and Fehr & Peers' internal *Crosswalk+* tool for identifying suitable crossing treatments, based on roadway characteristics (speeds, lanes, volumes) and land use context. These guidelines are also consistent with a separate framework for crossing treatment identification and prioritization that Fehr & Peers has developed (as a draft) for the City of Mukilteo's internal use.

A basic decision flowchart from these best practices is shown in **Figure 1**.

Figure 1 - Example of Decision Flowchart for Identifying the Need for Crossing Enhancements

Fehr & Peers identified multiple crossing enhancements to improve the comfort and visibility of pedestrians, bicyclists, and transit riders along the corridor, which include:

- **Rectangular Rapid Flashing Beacon (RRFB) at 5th Street / Lincoln Avenue.** Recent WSDOT guidance details options for constructing RRFBs at uncontrolled intersections on two-lane two-way roadways.¹ These include two RRFB posts on each leg of the marked crosswalks across 5th Street. This location was requested in the public engagement process, in part due to the nearby pedestrian generators including Rosehill Community Center, local restaurants, and connectivity from the residences on Goat Trail Road/Washington Avenue to Old Town. This stretch of 5th Street has a posted speed of 25 miles per hour (mph) and recent speed data indicate the 85th percentile speed was 33 mph. Per FHWA guidance, an RRFB is an appropriate option for this location given speeds, traffic volumes, and lane configurations.
- **Raised intersection and bike crosswalks at 5th Street / Cornelia Avenue.** By raising the intersection, pedestrians would benefit from enhanced visibility and drivers would slow down to accommodate the raised table, which serves a purpose similar to a speed bump. Comments from the public outreach process identified Cornelia Avenue as a popular crossing location.

The current design plans identify Cornelia Avenue as a location to route bicyclists from 5th Street to 3rd Street, a low speed and low volume roadway. The existing RRFB at this location requires most bicyclists to dismount to trigger the RRFB (something that many bicyclists will not do because of the extra time and inconvenience to reach the button). A raised intersection provides visibility benefits and would be more practical to traverse for bicyclists. In addition, the city may repurpose the existing RRFB to another location. We recommend that the design include a "bike crosswalk" (also known as a "cross bike"), which includes green paint commonly associated with bicycle facilities and are a visual cue to drivers to look out for bicyclists, as well as a wayfinding to route bicyclists to 3rd Street. **Figure 2** shows an example cross bike from the *Seattle Right-of-Way Improvements Manual*.²

Figure 2 - Intersection Cross bike from the Seattle Right-of-Way Improvements Manual.

Everett Transit Route 18 currently stops on 5th Street near Loveland Avenue and east of Park Avenue. We recommend that these stops be consolidated to new stops at Cornelia Avenue. This will focus driver attention to a multimodal intersection and encourage pedestrians and bicyclists accessing transit to cross at an enhanced location. Any stop consolidation would require further discussions with Everett Transit.

The public outreach process indicated that the community would like placemaking elements, so long as it does not change the character of the Old Town community. A raised intersection serves multiple purposes for pedestrian and bicycle visibility as well as traffic calming, without substantially changing the character of the corridor. Additionally,

the design of the intersection may provide cohesion with intersection design elements at 5th Street and Lincoln Avenue today.

In addition to these primary recommendations, the City may consider the following options.

- **RRFB at the Tails and Trails Dog Park east of 5th Street / Park Avenue.** This location is a logical desire line between parking in Centennial Park and the Tails and Trails Dog Park, two pedestrian generators. Further evaluation is required to evaluate sight distance at this location, which may be impacted by the curvature of the roadway.
- **Curb bulb outs west of Mukilteo Lane.** Unlike other locations, this location does not meet minimum best practice requirements for a marked crosswalk or other enhancement. Notably, there are no major pedestrian trip generators in the vicinity of the intersection. However, community members have raised concerns about speeding along this segment, which has a posted speed of 35 mph. Design of crossing enhancements should take into consideration the slightly skewed intersection geometry, which may be challenging for southbound right turning vehicles to see pedestrians. By offsetting the crosswalk west of the intersection and reducing speeds through curb bulbs, drivers making a southbound right turn from Mukilteo Lane would have more time to see pedestrians before stopping.

This location serves as the entry point into Mukilteo from the City of Everett and provides a unique placemaking opportunity.

Design elements should incorporate cohesion with the rest of the corridor and welcome the community to Mukilteo.

Why Can't Mukilteo Install Marked Crosswalks at All Potential Crossing Locations?

The public often is confused about why there is even a debate about marking crosswalks. It's just paint after all, right?

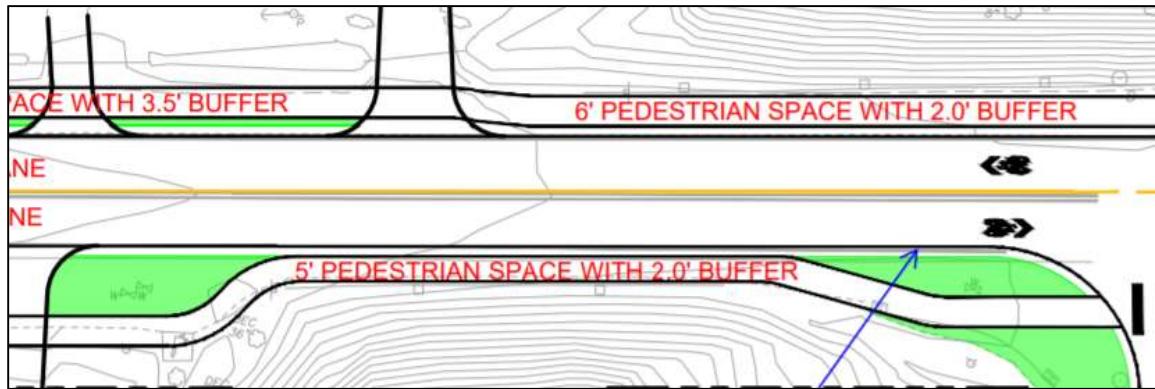

It turns out that it is not that simple. There has been ample research on pedestrian crossing safety and the value of marking or enhancing crosswalks. The data show that marking all legal crossing requirements would not improve pedestrian safety and perhaps could increase the risk of crashes because of the increased "visual clutter" of additional crosswalk markings. (Keep in mind that every intersection includes legal, but typically unmarked crossings at all the corners).

Therefore, crosswalks are best marked where there is a concentration of pedestrian activity and higher traffic volumes or speeds that make crossing the road more difficult. Therefore, data and analysis is required to identify appropriate locations to install marked crossings or other crosswalk enhancements.

- **Rumble strips or a low extruded curb at constrained points along the corridor.** In addition to crossing treatments, another way to address pedestrian comfort is to help drivers from encroaching into the pedestrian zone. While the current design includes landscaped buffers between vehicles and pedestrians, there is a constraint on the west end of the corridor above a ravine. The design may benefit from safety shoulder treatments such as rumble strips, raised pavement markers, a low extruded asphalt curb angled flares to alert drivers that they should slow down given the potential for pedestrians within a close proximity. **Figure 3** shows an excerpt of the preferred concept design to illustrate where rumble strips or a low extruded curb would be appropriate near the 5' pedestrian space with 2' buffer.

Figure 3 - Preferred Concept Design (11/03/2021).

It is important to note that the recommended crossing treatments identified in this memo are based on a limited review of data. Notably, field conditions such as lighting levels, sight distance, and speed verification were not conducted. Some traffic counts were estimated based on daily traffic data. As part of refining this conceptual design to a level of detail sufficient for construction, City staff should conduct a more detailed site-specific review to confirm feasibility, appropriateness, and develop formal design plans for the treatments.
