**Subject:** Lift Station comments

Hello Linda,

Thanks for your call Wednesday. Our concern with the lift station project is water run off. We would like to be assured that the water will be contained in a manner that will stop the damage to properties. There are currently issues with water going through properties on Webster and others. Will the lift station make this water issue better or worse? Thank you,

Don and Renee Ripley

Mr. Ripley,

Thank you for your comments regarding the drainage issues on Webster and the proposed lift station (copied below). The City requires stormwater management on the project, which includes evidence from the District that there will be no negative impacts on downstream neighbors due to the project. The project is still under review, however, the Wastewater District has acknowledged the flooding issues on Webster and their project currently shows the flows not being directed towards Webster.

If you have any further questions, please let me know.
